An Asset Management System can also help manage the employees who work in this area, for example, by keeping track of who has been trained on which equipment. This same shipping department will also have inventory such as rolls of tape for the tape machine, labels for the printer, and fuel for the fork trucks. These are materials that are not company assets, but rather are consumed in the everyday operation of the business.

Inventory can be a company's most important asset. Inventory management is where all the elements of the supply chain converge. Too little inventory when and where it's needed can create unhappy customers. But a large inventory has its own liabilities — the cost to store and insure it, and the risk of spoilage, theft and damage.

[The Difference Between Inventory Management and Asset Tracking](#)

Define an IT Asset Lifecycle. Build an inventory management process that documents the lifecycle status of each IT asset. Asset lifecycle information will show IT administrators if an asset is in use, in storage, checked out, available, or retired. IT asset management best practices suggest that IT assets should be documented from the moment they are purchased until they are retired. When a lifecycle status is added to an asset, IT administrators can create reports showing assets ...
