You might refactor code that you have written the day before, while it's still fresh in your head, so that it is more readable and reusable when you may potentially look at it two months from now. As the motto says: "refactor early, refactor often." You may apply any of the "best practices" of code readability during the refactoring process.

To create code that is cohesive, is small, does not have unnecessary parts. When these principles are broken find a way to refactor or eliminate the additional pieces. It is not just about taking away or keeping code small but adopting a way of thinking about the design of the program and how each piece interacts with the other parts.

The purpose of code indentation and style is to make the program more readable and understandable. It saves lots of time while we revisit the code and use it. A style guide provides a road map which the developer should follow and implement in coding. So in a group of developers, all the code generated will be of consistent in nature and reusable by any coder/developer. The worst part of ...

@Lundin There are lots of situations where lots of people would find binary numbers more readable. In fact, when defining enums with lots of flags, many programmers will annotate every constant with its binary value in a comment. And in fact now that C++ provides user-defined literals, the first one many people implement is an extension for binary number literals. – Konrad Rudolph Feb 27 '13 ...
